Business package hits the chart

A BUSINESS software package has achieved a solid first by starting its way into the all-important Startup Top 50 chart on the eve of its launch for the Atari 8-bit range.

Mini Office II, the second writing title from Database Software (061 428 8008) entered the first selling list at number 28.

The chart is considered the most significant of all on the UK software scene because it includes all machine formats. And what is even more surprising about this Office II is that recent success is that it had to compete against games costing as little as £1.95.

Not that this is the first challenge to be achieved by the package. For years, it launched in October 1984 the original Mini Office was the finalist in two categories of the British Microcomputer Awards — the Critics of the industry.

The first version for the BBC Micro also displaced games to reach the Top Ten for that machine.

Mini Office version one went on to win national acclaim for being ahead of its time in that it was the first professionally written low-cost business package. At just £5.95 on cassette for the BBC Micro, the price tag was cut almost revolutionary as a national competitor and several hundred pounds.

Its rich and varied database Mini Office II took 28 main games programming and solutions to modules — word processor, database, spreadsheet, graphics, label printer and communications.

Mini Office II is priced at £19.95 on disc for the Atari 8-bit range.

Atari is wooing software houses

ATARI's new good enough policy towards support companies is already paying dividends. Software house representatives are now visiting Atari UK headquarters at the rate of two or three a day.

And the result, says manager of software marketing Roland Whitworth is great cooperation.

"We are showing that we want to keep up with new releases," he said.

He is receiving assurances that there will be plenty of software for the 8-bit and especially for the 68000 games machines.

What is really encouraging is that there is an increasing number of firms agreeing themselves to producing cartridges for the new games machines, said Whitworth.

The software house response confirms the company's belief that a major revival in the video console sector will happen this year.

A company spokesman told Atari Users: "We believe the average age of prospective buyers is getting younger."

This means there are a lot of youngsters out there who aren't really ready for a proper mouse but are keen to

get their hands on a games machine.

"And it doesn't hurt Atari's prospects that we already have a games software range that is going to grow."

Atari originally estimated it would sell 150,000 8-bit computers and games consoles in 1987.

But this figure had to be revised when advance orders for 70,000 units were placed within the first few weeks of the year.

Now the company is talking about selling at least 200,000 — 400,000 in a quarter of a million — games machines in 1987.

Losing its magic . . .

WADZ is still the best text adventure supplier Robbo.

The company is looking for new writers on the Atari 8-bit but says software manager Rod Drury: "We are not too keen on magic adventures any more — unless they are really original."

He explained that the firm had a very good freelance programmer doing conversion work for the Atari, so that only segments were needed.

What are we looking for? finished or part finished programs which we will market. We would evaluate them and even if the programming is not brilliant we can work on them."

He said most Robbo (0443) 227264 adventures had more than 200 segments, which was why publishers had never finished them. They were not out of the question.

Drury said that they were happy to get more disc-based adventures for the Atari.

A Mole in the micro

THE latest Adrian Mole series on Thames Television forms the basis of a new Virgin Games release for the April 5 launch.

It is the sequel to The Secret Diary of Adrian Mole

which was produced by Level 9 and Mosney Publishing.

The Growing Pains of Adrian Mole comes from the same joint source but is being marketed by Virgin Games at £9.95.

On 16th March 1987, 100 fellow diggers joined the green field site of the new J headquarters.

Digging away for Atari User's new home

The new headquaters for Atari User. A £1.1 million computer is at the end of a £100

THE world's first mass up-starting ceremony heralded the start of building a new £1 million home for Atari User and its sister Database Publishing offices near Maidenhead.

All 100 Database employees took part in the two day event of ground-breaking to celebrate their role in the company's rise to prominence in computer magazine publishing.

The new site in the Chichester countryside near Slough will be the start of a new era of growth and change for the company, having recently received a signal from Database head Derek Moxley.

"We originally hoped with the idea of making a leading figure in the computer industry to perform the ceremony," he said, "but decided in the end to keep it within the company."

"All our employees have contributed to Database becoming the UK's leading publisher of computer magazines - so they all deserved to play a part in the big day."

BT titles collect 31 awards

BRITISH Telecom's software titles have scooped an amazing total of 31 awards over and above in the past 12 months.

The accolades were awarded by reader polls and computer journalists' votes in

magazines published in Britain, France, Germany and the United States.

More than two-thirds of Telecom's sales of programmes on the Rainbow, Pinard and Impact labels are Atari computers.

After The Pawn, The Thieves

WHEN The Pawn from Pinard was auctioned across the board it was almost inevitable that there should be some sort of follow up.

But the designers, Magella Brothers, rejected the temptation to do a 'what you left off' game.

Guided by Thieves, out on the Atari 8 bit, shares the same setting as The Pawn, the mystical land of Karavonia.

But there the similarity ends. All the characters and locations are new, as is the style. Designed to appeal to a wider range of adventurers, it has a more direct gameplay with more problems to solve.

Increased intelligence top is another feature. Humans

animals and plants can be addressed in complex sentences through the parser.

The adventure opens with your application to join the guild of elite band of professional assassins, where tests are set to prove an applicant's worth and status.

You are given a task which will test both your wit and ingenuity. You have to reassemble an island and capture its treasures while encountering a variety of useful and dangerous things.

It includes several complex puzzles and 30 scene settings. Illustrations, which, claim Pinard (01 348 6535), will be new direction to computer graphics.

Soccer promotion

ONE of the first results of Pinard's takeover of the Addictive Games label is the release on the Atari 8 bit of the best selling soccer card poker game ever Football Manager in £2.99.

This means, says Pinard, the game, in its new double cassette packaging, will be competing in a new dimension against the budget software giants.

"We believe this newcomer is likely to attract quite a few sports as it moves through the park and to the top of the league".

Pinard (01-804-8180) is plan-

ning to re-launch Addictive's Season Juggernaut to carry more budget-priced games.

Flying high

HIGH performance was never as eventful as in Up Up and Away from Bug-Bite for the Atari 8 bit micro.

The challenge in your flight path includes aircraft, bees, birds, lightning, and punka flying missiles.

Fast problems, landing and taking off again, and throwing sandbags at the punka add to the fun. Price £2.99.

THE GALLUP CHART TOP 20 ATARI SOFTWARE

THIS MONTH	LAST MONTH	TITLE (Software House)	PRICE

Compiled by GellaglyMicroscope

Budget software in many ways the order of the day, with Over's Secret the top-selling full-price game, followed by the excellent simulation Silent Service. By the June issue we will know how Atari User's Star Game, Spintime, is selling.

Bid to bring back BBC's Micro Live

TV's only regular computer programme, *Micro Live*, has been axed. But Database Publications, promoted by hosts of letters from readers, is determined it should be brought back.

The last *Micro Live* in the present series appeared at the end of March.

Head of Continuing Education (Television) at the BBC, David Hargreaves said: "This season of *Micro Live* was its third. We have decided not to plan a fourth for next winter."

We want to pause, take stock and think about how we ought to be making the best contribution to our understanding of information technology in the future.

Gavin Moxon, head of Database Publications, said: "*Micro Live* has played a leading role in introducing the delights of computing to an ever growing readership."

To tell the latest news, when so many exciting developments are taking place in the whole world of microcomputing, is a real pleasure.

Programmes director David Allen said he appreciated Database's concern.

It is a very important and useful needs to have our leading magazine on television.

"There is a lot to be done in keeping the subject in the general public's eye because it is important for the community and consumer to up-to-date ways."

So, *Micro Live* readers, it is time to play your part. If you want to help save *Micro Live*, write to: The Computer BBC, 3, The Circus, Wood Lane, London W13.

With Left programme for *Micro Live*, Centre Jackyline Price Harris

Youth club runs an Atari micro workshop

A LONDON youth club that uses Atari micros to take computing to the community is appealing for support to it own workshop. It is called:

Home-Club, Youth Club in Loughborough needs £5,000 for projects it hopes to carry out this year.

After being approached by the Loughborough youth service last year it provided a workshop with computing facilities for 25 local youth groups.

Members used in the project included two STs, three 128Ks, and eight 8088s, some owned by the club and the others borrowed from various sources. Mrs. power services funded five part-time computer instructors based at Home-Club.

Over a four week period more than 1,200 local youngsters were given

hands-on experience of micro.

These daily sessions covered various topics, such as games writing, music, data processing, video editing, and management of personal data.

This summer Home-Club wants to run a similar open computer workshop, but this time on four different public places including a shopping centre and a museum to enable adults to join in as well.

There are also plans this year to take Atari micros along to the local children's hospital so that long-term patients there can enjoy them.

We also need to keep the

equipment going at Home-Club under youth worker Miss Forebush said Alan User.

The Atari micros are an invaluable tool in developing decision making, problem solving and other group work.

If we don't get the financial help we need this year not only will our community projects suffer but we shall possibly have to retreat from public activities at the club itself.

On the other hand if we can find £5,000 this year somewhere we can add only repeat last summer's success but can probably improve on it as well.

Drive in America

AT&T has appointed Jackyline Price Instruments and IBM executive Jerry Brown as vice president and general manager for North American operations.

The appointment is part of a new bid to increase Atari's share of the US market, said Jack Terrell.

Personal computers are a

key component in our corporate growth strategy", he said.

The 286ST and 186ST are already among the best-selling personal computers in Europe - we now plan to focus our efforts on the US and Jerry Brown will play a major role in leading that effort.

More hits

THE seventh volume of English Software's Smash Hits for the Atari 8-bit machines has been released. It includes *Ultimate Guide*, *Colossal Chess 2.0*, *Star Wars* and *Star Wars*.

English (081 333 1367) has released it on two cassette for £9.95 and on disc for £14.95.

HAVE you ever looked on in envy at your ST owning colleagues general access to all sorts of pop-up utility programs? Well now you can have something similar on your trusty 8 bit Atari — a few function pop up calculators taking only 32 bytes of user memory.

This program creates a pop up calculator which takes half under the three row on its 32, or 66, machines. The machine which calls it is only 32 bytes long. Hence the calculator doesn't even occupy any of your program bank space.

However, because of the way in which the calculator uses the bank switched memory system of the 50/66 machines it will not work on an old 400 or 800.

Let's take a look at how it works. The program can be split into six parts. Lines 10 to 220 provide the first screen output and check the date. The program will first ask if you want to make a tape to a disc, then go through the date to make sure that it's correct.

If there are any discrepancies a warning message will be displayed with the relevant line number. Correct the error and run the program again until it is free of error.

Lines 500 to 770 generate a cassette form of the program. Lines 2000-2700 are listed to the cassette, followed by the machine code data file. These files may be created by disc utils, along with the data statements 2000-3110.

Lines 1000 to 1170 enable the program to check its own date — it points to any date errors and flags them. The use of bit 0 flags) and this checker should take down any date errors.

As this is a machine code program, any errors may flag your computer up with no escape except to rebuild the machine. This is also a good reason to save the program before you run it.

Lines 2000 to 2700 constitute the data loading program for cassette users. They are listed to the cassette, followed by the data for the calculator and a short machine code loader.

This loader is coded into page 0 and puts the calculator data under the Basic rom. The program then deletes itself from memory. These lines may be omitted by disc utils.

Lines 4000 to 4240 create the disc version. First an AUTORUN SYS file is created. This is a three part file consisting of a program to run the Basic rom off the calculator in standard load format and a program to turn the Basic rom back on.

After this is created a program

Maths magic on your Atari

called CALC is written to the disc. Calling CALC from the Dos menu (press option 1) will allow you to turn the calculator directly. These programs may be omitted by cassette users, along with the data statements lines 2000-2000.

Lines 3000 to 3200 displays three pages of user information on. Page 1 gives general background information, page 2 describes assembler use of the calculator, and page 3 shows a program to run the calculator from Basic.

Loading the calculator is a little different depending on whether you are working with cassettes or disc. Disc users should simply load the machine with the disc containing the AUTORUN SYS file in the drive, which will install the calculator.

It is possible to append another machine code program to the back of this one — for example an AUTORUN SYS that runs a Basic program. All you need do is resume the original AUTORUN SYS as BASIC, then create the calculator AUTORUN SYS and append your program file to the end of it.

Cassette users should ENTER and then run the tape created by the program we have listed. This will load the data and NEW stuff, leaving the calculator ready for use.

From Basic, a small machine code program needs to be run to call the calculator. Program 8 demonstrates one such technique.

Lines 10000 to 10020 hold the

necessary code, and this data can easily be placed into a string for convenience. This code can equally well be coded into page 0 (1000 onwards) and be run with $0=1000/1000$.

This is more useful when working in direct mode, while strings are faster for assemblers programs as they leave page 0 free. From a machine code program just skip the initial PLA (100) and 200 to the start of the code.

The calculator doesn't offer anything fancy, just the basic number keys and the $+$, $-$, \times function keys.

To clear an input error press E, to clear the calculator completely press A and to quit back to Basic press Q.

If a result is too large, OVER RANGE will show in the display. It will do continuous calculation (such as $3 \times 3 + 50 + 3 - 81$) but doesn't show powers ($1 \times 1 \times 1$). Results are not stored anywhere and so will have to be written down.

Operation is protected from the BASIC key by SYSTEM RESET will dump you back into Basic in the READY prompt. Division by ZERO is not trapped and thus can give some odd results.

Perhaps you might like to consider modifying the code so to patch into the cassette editor device handler to allow you to change type. CALC at the prompt instead of the usual call. Let us know how you get on!

Mini Office II

6 powerful home and business programs in just **ONE** package – at a price that simply can't be matched!

**Voted
Business Program of
the Year – 1983 AND 1986
By the Business Week
This package is
incredible value!**

WORD PROCESSOR

Compose a letter, set the print-out options using embedded commands or menus, use the mail merge facility to produce personalized circulars – and more!

SPREADSHEET

Prepare budgets or tables, total columns or rows with ease, copy formulas absolutely or relatively, use a wide selection of mathematical and scientific functions, recalculate automatically – and more!

GRAPHICS

Enter data directly or load data from the spreadsheet, produce pie charts, display bar charts side by side or stacked, overlay line graphs – and more!

DATABASE

Build up a versatile card index, use the flexible print-out routine, do powerful multi-field sorting, perform all arithmetic functions, link with the word processor – and more!

COMMUNICATIONS

Using a modem you can access services such as MailLink and order a wide range of goods from flowers to software, and electronic mail, text and tele-messages in a flash – and more!

LABEL PRINTER

Design the layout of a label with the easy-to-use editor, select label size and sheet format, read in database files, print out in any quantity – and more!

520 STFM SYSTEM BY A.S.&T.

The new 520 STFM system offers the best value for money in the computer market. The system has been built to give you the best of both worlds - a powerful and expanding system which can be upgraded to meet your needs in the future.

MEMORY:

The new 520 STFM system has 128K of memory. This can be upgraded to 256K or 512K. The system also has a 128K cache memory which can be upgraded to 256K or 512K.

DISC DRIVES:

The 520 STFM system has a built-in 5.25 inch floppy disk drive. This can be upgraded to a 3.5 inch floppy disk drive. The system also has a 128K cache memory which can be upgraded to 256K or 512K.

PROCESSOR:

The 520 STFM system has a 16MHz processor. This can be upgraded to a 20MHz processor. The system also has a 128K cache memory which can be upgraded to 256K or 512K.

DISPLAY:

The 520 STFM system has a built-in display. This can be upgraded to a 15 inch display. The system also has a 128K cache memory which can be upgraded to 256K or 512K.

HIGH INTERFACES:

The 520 STFM system has a high interface. This can be upgraded to a 20MHz processor. The system also has a 128K cache memory which can be upgraded to 256K or 512K.

MOVES:

The 520 STFM system has a built-in moves. This can be upgraded to a 20MHz processor. The system also has a 128K cache memory which can be upgraded to 256K or 512K.

PERIPHERAL CONNECTORS:

The 520 STFM system has a built-in peripheral connectors. This can be upgraded to a 20MHz processor. The system also has a 128K cache memory which can be upgraded to 256K or 512K.

BUILT-IN SOFTWARE IS NOW:

The 520 STFM system has a built-in software. This can be upgraded to a 20MHz processor. The system also has a 128K cache memory which can be upgraded to 256K or 512K.

SOFTWARE ON 5 DISCS:

The 520 STFM system has a built-in software on 5 discs. This can be upgraded to a 20MHz processor. The system also has a 128K cache memory which can be upgraded to 256K or 512K.

Lively lobsters

Program: Space Lobsters
Price: £19.95 (overseas £24.95)
 (incl.)
Supplier: Red Rat 21 Jenner
 51 Manchester Road
 St. Albans, Herts. AL3 5JH
 Tel: 081 534 5547

I've seen most of the sci-fi and space films Hollywood has churned out over the last few years. I've also spent many a happy evening absorbed in the seemingly endless volume of Star Trek and the weird world of the Twilight Zone.

But never have I come across Space Lobsters in any of these venues.

In this game, Captain Exquisite has to fight off three special creatures and other guardians of the Colossus spaceship to discover hidden computer codes to facilitate his

escape should he become over-relied on.

With limited ammunition and via the use of teleported bombs, Captain Exquisite (unusually) acts as a tough cookie, really. Travels through the various corridor levels of the ship, exploring more than 150 screens with a quest to find the 10 elusive computer codes.

Hindering his progress are the roaming Robo-Droids (recent descendants of the Robo-Droids) and famed for their problems with vocal pronunciation (and spelling) — but that's another story.

Captain Exquisite has to blast his way from level to level, occasionally finding points for supplies on his way.

Clearer use of split screen

graphics has produced a mixture of funny and character-filled graphics with good animation of Captain Exquisite being the main feature of the game.

Excellent title music and good sound effects serve to confirm the view that there is still a market for reasonably priced software, although the charts seem to indicate that true budget Atari software is now the order of the day.

But if you are looking for a good animated fast action game, Star Island and Shoot'n'Run again, style game with a wide degree of control to boot, then Space Lobsters might just be your cup of soup.

 Tel: 0703 20001

SPIN DOZZY is a Marble Madness clone which involves going on an inverted pyramid around the different screens, rescuing them out and collecting ring jewels along the way.

You play against a clock which doesn't even pause when you plummet to your death — you lose a previous five seconds as well as a life.

If you collect one of the many jewels, screen about the screen, you gain 10 seconds, and you also get a bonus of seven seconds each time you enter a new screen.

Occasionally, you may encounter a couple of nasty creatures who push you out of the room and see your

time added those at all costs.

You can tell up a map at any time to show you your current position in the game, any unmapped rooms, mapped rooms with a jewel in, and completed rooms. There are more than 100 to visit.

A nice feature is that if you lose sight of yourself on the screen, you can turn your viewpoint round so that you can see all angles of the room or you can bend yourself north.

To make life on some screens a whole lot easier, there are life which can take you up to a higher ledge, which would be otherwise inaccessible without searching many other screens for a lamp.

A word of warning about the life. To get some of them to work you have to find and collect the object which is depicted on the life's surface.

When you need a bit more speed to jump over a gap in

the pathway or climb a life, there is always the speed boost which is activated by holding down the fire button. This sends the pyramid flying along, but it's easy to control it and overshoot your target or crash.

Thankfully you can press the emergency stopkey (the spacebar) to stop you dead on any surface with grip, which includes ice, water and teleporters.

Taking off is impossible; you can use these to bounce over to an area impossible to reach by any other means.

The 3D graphics are pro-

ably the best I've ever seen and the sound effects quite realistic, but you can't hear them very often. This is a shame as they enhance the game greatly. Another minor gripe is that there is no music whatsoever.

Despite these minor niggles this is an excellent game which will keep you coming back for more for many weeks to come.

There is a growing consensus among political scientists that the United States is in a "post-9/11" era, characterized by a series of interrelated events that have reshaped the country's political, economic, and social landscape. This new era is defined by the September 11 attacks, the subsequent wars in Afghanistan and Iraq, the rise of terrorism, and the global financial crisis. These events have led to a re-evaluation of American foreign policy, domestic security, and the role of the government in society. The post-9/11 era is a period of significant change and challenge for the United States, and it is essential to understand its impact on the country's future.

Not daring enough

Program: *Who Dares Wins II*
Form: CD-ROM
Supplier: Tynesoft
Distributor: Epsilon
Version: 1.00
System: IBM PC and
Amiga 286/386
Telephone: 081 434 6117

WHO Dares Wins II is very much a *Continuity* clone – run to the top of the screen and shoot anything that moves.

You start in the middle of a forest looking a bit short, stout and silly – rather like *Big Lones Collins* in the film of the same title.

The forest forest is perhaps a bit of an overstatement as it consists of a sparse collection of lanky, lopsided trees. Indeed, the graphics generally have a child-like look to them and the colours used are rather drab.

All around-ringing soldiers are shooting away at random. You must break through their ranks, break

elling up the screen towards the end of the game a few screens further on.

Apart from the trees and soldiers, the scenery consists of bombed-out buildings and various discarded oil drums. No cover or protection is afforded by any of these objects – bullets pass straight through them all.

Indeed you can even walk through some of the walls, which certainly doesn't add to the game's realism.

Guiding the flying bullets you can return fire. After with your gun or your pick of 12 grenades. When the enemy is shot, you are treated to what looks like a brief explosion of "Manning" as the instant-death soldier writhes in his death throes before expiring.

Further along you encounter helicopters and armoured cars. There are also ponds to be avoided – you'll drown. I've trouble

into one. Eventually you reach the end of the game, a guard post and barrier blocking passage.

Movement is slightly on the slow side, and the speed of your bullets frustratingly so. Throughout the game the computer blazes out a fatalistic, stretching the Atari's sound capabilities about as much as the visuals do its graphics abilities – not a lot.

Although the game is playable in my mind there are better versions around. It's not uncommon for a

good game concept to be spoiled by not being carried through thoroughly enough. I recently reviewed *Gun Line* which is almost identical to *Who Dares Wins II*. Although by no means perfect it was altogether more pleasing and was around a quarter of the price.

Out in the cold

Program: *Winter Olympics Plus* (VHS) (version 1.0.0)
Supplier: Tynesoft
Distributor: Epsilon
Version: 1.00
System: IBM PC and
Amiga 286/386
Telephone: 081 434 6117

WINTER OLYMPICS from Tynesoft is another event compilation following on the heels of *Summer Games*, *Winter Games*, *Continuity* and so on. There are five events – speed skating, skeleton, slalom, downhill and the Cross Run bobblehead.

Speed skating is a straight-line race against the clock. There is a computer-controlled opponent in the top half of a split-screen and although this may help you pace the race, it would have added more to the game to have allowed a two-player option.

Movement is affected by the wind's wiggling of the air stick.

In the slalom event the scenery consists of a rather stark, wooded forest which is usually avoided.

For most your path through gates marked by two poles, but being a pole means a time penalty and colliding with a tree means the end of the race.

Next comes the old jump. Accelerating down the slope, you press the fire button to jump, the air being so responsive as possible.

As in the speed skating event how much you want to risk stopping your progress determines your terminal velocity.

The downhill race is very slightly different to the slalom. There are no gates to steer through, but some slight

diverting in the final moments is vital.

The last event of *Winter Olympics* is the Cross Run in which you air two miles of running.

One is a plain view of the environment by which you can see how far you have progressed. The second and smaller method is, from behind the bobblehead, looking down the road as it is.

This is quite bare – the graphics are bleak and quite simplistic, and the instructions jumpy. Speed is gained by sliding on snow

as possible to the rim of the wall around the ponds.

Winter Olympics sounds impressive of excitement during and great fun. Unfortunately Tynesoft fails to deliver as the individual games lack attention to detail and atmosphere.

Chess goes on Email

SCHOOLBOY Michael Harrison has emerged from behind the end of the first major chess tournament conducted via electronic mail.

Michael, aged 16, from City of London School East Area, Birmingham 17 at Elm School, Wellesbourne in the land of the British Chess Federation under 18 rapid play, individual chess postage.

The last three rounds of the tournament, which attracted 580 entrants, were staged on the MicroLink system and shown most be more on national television.

MicroLink provided individual electronic mailboxes for each competitor and linked them to Carfax on BBC television. Every move in each game was shown as it happened.

Moves were transmitted between opponents as MicroLink accepts mail messages, at the same time registering at Carfax and with the match table.

It was a major test of MicroLink's speed and efficiency — the eight competitors in the quarter final came from places as far apart as Edinburgh, Cardiff, Belfast and London.

Lincolnshire primary school headmaster John Tait, who organised the tournament, said afterwards: "It was a great success. Technically the MicroLink system was absolutely spot on."

MicroLink and Carfax provided a fitting stage for dual paired players to demonstrate why they are opposed only to the Russian youngsters in the world of chess these days.

Typesetting on the line

ONLINE typesetting is coming into its own as an alternative to traditional methods and MicroLink is playing its part in this booming growth area of commercial printing.

Many small businesses which require professional quality printed material but can't afford the cost in time and money of several typesetting are turning to firms like Wordstream for help.

The Bourneville-based

company, owned by husband and wife team David and Jackie Partridge, provides a service via electronic mail with a choice of 160 different typefaces.

Wordstream's online 24 hours a day seven days a week, offering next day results at only a tenth of the cost of traditional typesetting.

Eighteen months after its launch, Wordstream has chalked up its 1,000th customer, and now the

firm is going international via MicroLink.

Primary targets are Europe, where MicroLink has many subscribers, and the USA.

Specifically developed MicroLink technology will enable the contents of Wordstream's mailbox to be downloaded automatically every 15 minutes of the day or night and transferred directly on to typesetting equipment for processing.

TRADE LINK

DESPITE the difficulties caused by new manufacturing techniques relating to work with South Africa, micro-linkers in the industry have to soldier on regardless.

One of them, computer consultant Simon Crawford, has joined MicroLink in order to improve links with hardware and software suppliers in Britain.

"When you have the situation where leading firms have cut their ties with South Africa, it is essential to explore other sources of supply," he says.

MicroLink's tele and electronic mail services are the most economical and efficient methods of contact between people like himself and UK suppliers.

"Current circumstances would otherwise make it impossible to obtain new or replacement hardware and software which those in Britain of the boycott should remember are just as essential to the operations of apartheid."

Messages get a bright new look

FIVE new designs have been created for the colourful Telemessage greetings card series which is available through MicroLink and covers a variety of special events including births, weddings and coming of age.

Among them is a reproduction of Rembrandt's famous painting *The Storm at Sea* which is the largest surviving Rembrandt original — a painted panel of hyacinths and flowers that has been a favourite since 1625.

Telemessages now has

14 different card designs to meet a wide variety of needs, like birthdays, anniversaries, graduations, messages and condolences.

Only 10 are available to the public, however — the other card is exclusive to The Queen who uses it to send her personal greetings to people celebrating their 100th birthday or diamond wedding.

It costs as little as £2.20 to send a Telemessage greeting card via MicroLink.

LAST month we entered the theory behind cassette autoboots, and explained how to write and save machine code programs which will boot and run automatically. This month we look at a program which can convert your Basic programs to an autoboot cassette form.

Conversion is actually a three stage process. First you load a utility program called *Converter*. Next you load your Basic program and call the *Convert* routine with a *LOG* command. This makes an entirely new cassette file which has a short machine code routine inserted ahead of your Basic program.

Loading the resulting file is exactly the same as loading commercial autoboot software. Switch the computer on while holding down the Start key, then hit any key when the single beep sounds. Nothing else is automatic, and as soon as loading is complete your Basic program will run. The system works by inserting a new address handler and putting two commands (*GRAPHICS 0* and *RUN*) into Basic's root buffer. When Basic gets control it will assume that you have typed the first line in direct mode, so it executes the commands immediately.

Although this is a little more complex than using direct jumps to the Basic rom itself, it means that the converted programs will run with all versions of Basic, and thus on any Amstrad computer.

Back to practical matters: Program 1 makes the *Converter* file. When run the file will make an autoboot machine code cassette—in fact you might recognise lines 10 to 140 as being identical to last month's Program 11. Because the program works with machine code, all DATA statements must be absolutely correct or it will crash.

Watch out for the three most common typing errors—using the letter *O* instead of zero, typing two commas with no number in between, and typing a comma at the end of a program line. Be sure to save a copy before you try running it.

When you're sure everything is correct, insert a new tape and type *RUN*. Press *Record* and *Play* and then Return after you hear the usual two beeps. Once completed, label the finished cassette as '*Converter*' and make a note that it is an autoboot-format file. Once this is safely in your possession, Program 1 can be filed away as it won't be needed again.

Here are the step-by-step instructions for using *Converter* to convert an existing Basic program into the new cassette autoboot form:

■ Switch power off and insert the *Converter* cassette.

Autoboot your cassette files

More on adding that pro touch to your programs from resident guru **LEN GOLDING**

■ Switch power on while holding down the Start key and hit any key when the beeps sound. After the usual longer delay, you will hear the *Converter* file loading.

■ *LOG* the Basic program which you want turned into an autoboot, but don't run it.

■ Insert a blank, fully rewound cassette and type

X=USER1010

■ Press *Record* and *Play* and hit Return after the two beeps. Your Basic program will now be written to tape in autoboot format.

Remember that programs in this format cannot be loaded using any of Basic's commands—you must use the autoboot loading procedure. Once in memory, though, your program will behave just as though you had typed *CL:GOTO* and *RUN*.

Now it's time to write for a while and take a look at disc-based programs. There are two different systems available for making disc software load and run automatically—the autoboot or *AUTORUN SYS* block will work only with machine code, but *AUTORUN SYS* can be used to load and run a Basic program, giving the effect of a Basic autoboot.

Let's take disc autoboots first. Since they look and behave almost exactly like the cassette autoboots which we covered last time, we'll skip through the details fairly quickly.

When power is switched on with a disc drive connected, there must be some autoboot information on the disc, otherwise the screen will fill with *SCOT ERROR* messages. On a normal disc tape, the autoboot system loads and initializes the *DOS-SYS* file, but the process can be used for other things. Program 11 shows the correct format. Lines 10 to 580 form a *RAW* routine for disc which isn't part of the autoboot data itself.

The first six bytes in the autoboot

code (starting at line 600) are a header containing a block flag (normally zero), the number of sectors to load, the load address and finally the initialization address. The *DOS* needs this header and stores the load address in *DOSLOAD* (008 070) and the initial sector address in *DOSSECT* (12 13).

It then makes a note that it's using a disc-based program by storing a 1 in the *SCOTT* location (address 6). Once it has this information available it can load all the boot sectors into the correct addresses in memory.

The next thing the *DOS* does is to perform a *SCOT* to *DOSLOAD+8*, skipping over the six bytes of header data to access the code labelled *CODESET* in our example. This system will only be executed once, immediately after the sectors have been loaded, and must end with *CUE RTS*—otherwise you will get the *SCOT ERROR* message.

The second stage is another *SCOT*, this time to the initialization address now given by *DOSSECT*, which sends it to run *INIT* code. This section must end with *RTS* or the system will loop up. The boot process terminates by handing control to the language or other cartridge via a *JMP* to the cartridge start address.

If no cartridge is installed, the final *JMP* goes to the system stored in *DOSVIE* (10 11), which normally points to the self test or memory-check routine. You can change *DOSVEC* during the initialization routine so that the final *JMP* will go elsewhere, but only experienced machine code programmers are likely to use this facility as it completely bypasses Basic. The second *SCOT* and final *JMP* are always required whenever System Reset is present.

Autoboot code is always stored on the disc starting at sector 000, but none of the standard commands read-

HOTLINE**
0785 213928

PART two of the Advanced Character Editor (ACE) provides a set of subroutines to be added to the main program which appeared last month. Please note that part two will not work on its own.

When typing in Program 1, make sure to use the line numbers exactly as printed and include all the REM lines.

Before merging and running the combined programs it is a good idea to list part two to tape using the LIST "C" command or to disc with LIST "D ACE".

With part two loaded into memory, enter part one from last month's *Afterglow* by using the command ENTER "C" or for disc users ENTER "D ACE". You will then have merged parts one and two which can then be saved to tape using LIST "C" again or LIST "D DISKARD". The third and final section of ACE will be published next month.

Part two adds the menu commands **COLOUR**, **DATA**, **LOAD** and **SAVE**, **COLOUR** = C.

Addresses 708 to 712 are the colour registers that affect the text graphics modes.

The control allows you to alter the current colour. Left and right change the shade, while Up increases the brightness and Down decreases it.

To change colour registers press the five button. The colour registers act differently in Graphics 0 compared with Graphics 1 and 2 as shown in Figure 1 below.

The menu display shows the value of the colour chosen. To restore the colour in your own programs **FOR** the appropriate colour register with the value for example **FOR 0 708** will make the uppercase and number characters in Graphics 1 or 2 come out grey. To exit from Colour press the five key.

DATA = D.

The eight numbers displayed when you enter the Data option are the 84 suggested numbers used to define the current character shape in memory.

A character consists of 64 pixels

DATA sets for your own programs

Part 2 of STEPHEN WILLIAMSON'S series on creating your own custom-built character set

plotted within an 8 x 8 grid. For each row a single number can be used to represent the pattern of pixels. To do this, a pixel plotted within the row is given a value that depends on which column it is in. A pixel in the first column is given a value of 128, the second column of the third 32 and so on.

The values of all the pixels in the row are added up to give a single number from 0 (no pixels in a row) to 255 (8 pixels in a row). This can be seen from Table 1 which depicts how the letter A is bit mapped.

SAVE = S.

A **SAVE** menu appears on the right hand side of the main display. After an option has been chosen the device to which the data is saved must be specified. All data filenames must be a

maximum of eight letters long with no spaces. The character option will add the extension **.CHR** to the saved file and the Screen option will add **.SCR**. No extension is added for the Basic Subroutine. Characters saved must press **Replay** and **Play** then press **Return** when prompted.

BASIC SUBROUTINE = B.

This option will save to tape, disc or file to print the subroutines (up to a maximum of 32) that were written during the **DATA** section of ACE. An example of the sort of file that is created, a graph in Program 4.

CHARACTER = C.

This saves the whole redefined character set to cassette or disc.

SCREEN = S.

The Screen option saves PAD screens. The PAD option is included in ACE part three which will appear in next month's *Afterglow*. Until part three is merged with parts one and two then this option is unavailable.

LOAD = L.

Previously saved ACE character sets and PAD screen data can be loaded.

CHARACTER = C.

This loads a character set. Any set loaded will overwrite the current character set display. Day users must specify the file name (without extension) and cassette users must enter the appropriate character set tape press **Play** when prompted.

SCREEN = S.

This option loads PAD screens and will be discussed next month when the PAD and animation modules are added to ACE.

USING ACE CHARACTERS IN YOUR OWN PROGRAMS

The Basic subroutine that ACE saves is in listed form on lines 36500 to 36600 - so far obvious means you

It's our biggest competition ever

Treasure Hunt

YES Atari has in two years old this month, and what an exciting life it has had. We've seen - and helped to see - an amazing life in the number of Atari computers - a tremendous growth in the number of Atari users. There's been the hardware-creating excitement every few \$1, with more powerful versions appearing, every few months. Finally we've developed just a section of the imagination to the computer - now it's a complete magazine at its own right.

So there's time to celebrate this birthday. And to help us push the best out of Atari and some of Britain's leading software houses. Together we've come up with the biggest competition ever with a massive number of prizes - 200 of them, worth a total of £3,270!

What you have to do

Getted around that issue you will find various items of treasure. Your task is to count up how many gold bars, savings and prizes there are and get the maximum down on the entry coupon.

Then tell us the name of your favourite game and, or not more than 25 words, why you like it so much.

With 250 points you stand a good chance of winning something, no matter what point and go hunting for treasure, the harder!

Gold Bars
Savings
Prizes

My favourite game is _____

I keep going back to it because (in not more than 25 words) _____

Name _____

Age _____

Address _____

Postcode _____

Send to: Second Birthday Competition, Atari Ltd,
65 Charter Road, West Green, Stockport SK7 9NY

The prizes

TOP of the list is Atari the company that started it all, offering a complete 1300X system, with data recorder and printer, as well as two DOS 2500 video games console.

But most of the prizes come from the many software houses which continue to support the Atari computer with top-class games. And Atari, a fast-developing software house from Manchester, is offering 100 copies of the new game Space Lobsters, reviewed this issue.

Also from Manchester is Eagle Software, giving away 50 copies of its collection British Hits 7 From £12 Gold is the top class collection of the arcade smash, Gauntlet, with 20 copies up for grabs. And Gamma Software is giving 10 copies of the just-released Man Of War II.

On the budget side there's 10 copies each of five games from Argus: Clash of Death, Savage Fowl, Up-Up and Away, Quest for Survival and Gemini.

Micromania, without a doubt the biggest budget house, has offered an equal of each of its releases for the Atari: Action Rider, Gun Man and His Dead, Vagabond Jackson, Kickstart, Crystal Raider, Masterthrust, Molotov Man, Gun Law, Despatch Rider, Impact Jack pot, Desert and Ninja. And winning all the way from Finland are 10 copies of Markark.

From the masters of the simulation, Micromania, come five copies of six of its releases: F 10 Strike Eagle, Silent Service, Sky Flight, Kennedy Assassination, Crusade in Europe and Descent in the Desert.

For the adventure fanatics there's five copies of The Peep, Jewels of Darkness and Silicon Dreams from Humbird.

And for the more subtle games player, CDS is donating 10 copies each of Colossus Chess 4.0 and Stone Seven Breaker.

FEET S

THIS month's simple gadget makes it easy to produce freehand drawings on screen. Children will have hours of fun with it, and it has been known to occupy adults for the odd evening or two.

It's very easy to build and program needs no knowledge of electronics and can be built in a few hours by any 10K enthusiast. In fact it's an ideal test project for youngsters who are starting to study the ins and outs of our pattern of proprietary school.

It looks rather like an arcade game joystick, but it works by generating analogue rather than digital signals. 'What is that an advantage?' Well, a standard digital joystick can produce only nine separate codes, which your software has to interpret as directional commands - up, down and so on.

Because movement is limited to only eight directions, it's very difficult to draw diagonal lines except at 45 degrees, and almost impossible to produce curves.

Also, features like speed and distance have to be programmed separately - speed by using some kind of timing relay and distance by moving one step at a time for as long as the stick is held in any position.

Analogue joysticks work on an entirely different principle. They generate numbers which correspond to the current vertical and horizontal position of the stick itself.

In the Atari's case these numbers can vary from 1 to 255, so it's possible to convert them into actual screen coordinates for any mode up to Graphics 7. This means that you can plot a coloured pixel in any position you choose, and I guess you'll enjoy control over speed, distance and direction.

The machine is a bit quite complex - two potentiometers mounted at right angles on a double base - but fortunately they can be bought ready made. The type we've chosen is the

Figure 1

Analogue avenue to producing freehand drawings

Part II of LEN GOLDING's series on using your Atari to control devices

and often used for radio control, and is surprisingly inexpensive.

The resistance of each pot changes as you move the stick around, and the Atari's internal analogue-to-digital converter turns the two outputs into numbers which reflect the stick's vertical and horizontal positions.

As the resistance increases, so the numbers generated by the joystick also increase, starting at 1 - for resistance less than about 100Ω (ohms) - and rising to 255 when the resistance is around 500Ω.

Now the joystick we've chosen can vary from a few hundred ohms to

Figure 2

The graphic plotter

about 300K, and left to its own devices it will generate numbers from 1 to about 84, which means that you could map the results straight on to a Graphics 8 screen (80 x 40 pixels).

However, most of the time you will want better resolution than this. So how can we make the gadget return coordinates suitable for plotting directly to Graphics 7?

The answer is simple — just wire a capacitor between each pot output and the 0V line, as shown in Fig 1. Here's the theory. The analogue/digital converter works by measuring the time taken to charge an internal capacitor through the pot's resistance. If you increase the resistance, the capacitor will take longer to charge, so a higher number will be returned.

Similarly, if the capacitor is made larger, it will take longer to charge through a given resistance. The pot manufacturer fixes the resistance range for us, so to generate a different set of numbers we must somehow vary the capacitance value.

You can't get at the Alan's internal capacitor to change it, but having an extra capacitor between each pot and the 0V line has the same effect. By choosing the value with care, it is possible to make our joystick generate numbers from 1 to anywhere between 80 and 255.

This range still isn't adequate for direct mapping to a Graphics 8 screen (320 pixels wide), so very high resolution graphics are out — you can't use it for engineering drawing, for example. However it will work very well with any of the colour modes and we've tuned ours to Graphics 1.

The capacitance needed is around

87 microfarads, and you can tune this exact value in the shop. You could try 80µF, if you can find one with nice long leads, or a 1047 µF in parallel with a 100 µF will give approximately the same result.

The gadget's output should now vary from 1 to about 180, and our soft

ware can easily trim this to suit a 160 x 80 or 160 x 90 screen.

Construction of the electronics is very straightforward. There's no printed circuit board and everything is wired through a small terminal block as shown in Figure 2.

Twist the ends of the capacitors together tightly before fitting them to the block, so there's no risk that they will separate during use. Leads to the pots must be soldered and it's best to use stranded wire, rather than the old 4-core type, even though this is a little trickier to handle.

Although you could mount the joystick in a simple hand held box, the overhead arm system is much easier to control. Figures 3(a) and 3(b) show how to make it using odds and ends you may be able to find around the house.

The dimensions are not critical and may be varied to suit your meter etc. The pillar can be a short piece of wardrobe rail or a bit of 15mm or 20mm square plumbing pipe or even a section of wooden broom handle or 3/16" steel.

The hand-held box isn't strictly

All dimensions are in millimetres

Figure 2(a)

Figure 8

necessarily — an ordinary nut and bolt or even a wood screw will do — but I like you adjust the overhead arm more easily.

The dimensions shown will give you a drawing further about 170mm by 110mm, but moving the arm up or down will obviously expand or contract this area. The larger it is, the better the resolution, but the joystick tends to wobble if it extends beyond about 250mm, which diminishes any advantage.

The stylus is in two parts. Start by attaching a 150mm length of 3mm braided needle to the joystick spindle using a pin or join a 40A jumper as a makeshift. Available on some other and having effect can fit small gaps is best for this job.

The barrel of a cheap ballpoint pen then slides on to the needle making a device which will telescope along its length so that I can remain in contact with the baseboard at all times while the joystick arm swings around. A Peppermate 3000 Stick will fit very snugly, but most pen barrels should work.

Mount the joystick assembly in a small box with a cutout for the up rate of game 10. It is a good idea to mark dimensions on the plastic box first so make it fully a re-proper template and glue it to

the bare surface with Cosplay.

Do it the four 3mm holes and use a bracket to cut out the square aperture so that the display can be peered at without leaving a hole. The joint of body is attached with four number 4 self-tapping screws through the 3mm holes.

Strip the joystick cable to the arm and a bit in to large cable line or glass or insulating tape leaving a small loop to allow for vertical adjustment.

Now it's time to think about soft

ware, and Program 1 is the place to start. The disk is horizontal and with cut points are returned at address 804 and 808 respectively.

Use Program 1 to check that the numbers vary from 0 to at least 100. If not, the joystick necessarily is damaged (C) and/or (C). Even operations with normally the same value can vary by up to 10 per cent in the actual value, but even so the vast majority should give acceptable results.

Program 1 is a simple Basic routine which lists you through screen. Line 10 prints the mode and colour, and lines 20 to 30 calculate the coordinates to be plotted.

The two numbers returned by the joystick are adjusted to start the screen distance are 0 to 100 for X-axis, 0 to 70 for Y-axis — and ensure that the boundaries cannot be exceeded. Then it simply a matter of plotting a grid of nine chosen colour at these coordinates.

Actually it is not quite that easy because the analogue symbol works as fast as it will draw the computer's operating system, and you'll get a series of data rather than a continuous line if you move the stick at any reasonable speed.

The easy way round this is to use the C64's 100µsec and 110µsec bit in the gaps. The result is faster and correct if they are drawn at 100µsec but it is perfectly adequate for a simple sketch pad.

Program 11 adds a touch of elegance by using a vertical blank routine to do the job of stepping and converting the stick's output. It returns the horizontal position at

Figure 19

address 1780 and the vertical position at 1781, so all lines have to do a PUT or DRAWTO those coordinates.

Address 1780 contains the bottom margin value and defaults to 70, which is the top of the text window. If you would prefer a full-screen display select Graphics 23 on line 14 and reset the entire line.

35 POKB 1338 00

Remember that as with all machine-code programs you must get the data statements absolutely correct, and be

sure to save a copy before you try running it.

Program 19 is a completely self-contained sketchpad machine with nine colours it works rather like Program 18, but uses a PM graphics mode as a base. This can sweep over your picture without affecting it in any way so can be made to brush in one of three colours (Type when used a mouse, you will find the action faster).

At the start of the program the cursor is set to move, but can be positioned exactly where you want to start drawing. This is the pen lifted mode. From then on the different functions are selected by pressing keyboard keys.

- A = Move (pen)
- B = Change line
- C = Change/erase line
- D = Erase (set background colour)
- Space = Lift pen

This assumes that you are happy with the Atari default colours, but you can easily change them using the SETCOLUR command, any between lines 130 and 140. The cursor colour (which is held in address 1784—change it if you want).

As with Program 18 the bottom margin value at 70 and is held at address 1780. Put a full-screen display you changed POKB at work 16, after

entering the USB command.

Although this is a delightful little toy to play with it naturally cannot compare with expensive desktop or high-quality graph pads.

Lines can be drawn from the pixel internal cursor to on and the starting pen/brush colour that it starts to be used as a precision instrument. You can, for example, trace maps accurately onto the screen—though it makes a fair show of copying large line drawings or sketches a computer.

But as a freehand drawing aid it will give many hours of enjoyment, especially in using 640×480, and could be a useful introduction to learning keyboard skills.

Maybe you will see a really good PAINT type program for it?

MAIN PARTS REQUIRED FOR SKETCHPAD

	Machine Code
1 2 axis joystick	16100C
2 640 x 480 capacitors	89A2000
2 640 x 480 capacitors	89A2000
4 4-way to 6-way terminal block	16100C
1 Plastic box	141000
1 4 1/2" glass spacer	16100C
1 Handwritten font and 1 font	16100C
1 1/2" x 1/2" x 1/2" (approx) screws	89A2000
1 Joystick extension lead	

Program 18

Gear up your Basic for faster graphics

A machine code routine
by PARESH SOLANKI

MANY people have described the Atari's graphics as one of the best features. I won't argue, but how many of you have barked away because they looked too difficult to handle from Basic, or you simply weren't satisfied with the execution speeds you could achieve?

Well, no more excuses! Here is a machine language subroutine which you can use from Basic to achieve fast and exciting graphics without a lot of mess and fuss.

As a matter of fact, you make only one setup call to the subroutine and then forget it. Couldn't be simpler, could it? And you need to know nothing about machine language, either — just a couple of POKEs, and you'll have your players dancing around the television screen.

One feature of the Atari with which you may not be familiar is its interrupt mechanism, and it is this which can be used to move your players about at machine language speed — all without the overhead of calling it each time from your Basic program.

In fact this interrupt mechanism can be made to do anything — change colour registers, update sound values, and much more, but before we explore this useful feature, let's take a quick refresher course on interrupts.

As you know, the Atari keeps itself pretty busy doing its housekeeping chores even while it is running your Basic program. Among other things it must maintain the steady delivery of information to your television screen, allowing it constantly to update the display.

Multiple, concurrent activities are performed by dividing one particular activity to get actually interrupt another.

The traditional analogy is that of a busy business executive who, while engaged in a meeting with an assistant, is interrupted by a telephone call.

The ringing phone signals the interrupt and the executive pauses his meeting and answers the phone. After dropping of the call, the executive then resumes his meeting at the point he left off — hopefully.

A similar, but more controlled sequence of operations occurs each time a complete picture is shown by your television set. The TV's electron beam paints the picture by sweeping in horizontal rows across the picture tube beginning at the upper left hand corner and ending at the lower right.

The beam is turned off when it reaches the lower right corner and is returned to its upper left starting position. This return trip is essentially a vertical positioning movement, so the period when the beam is turned off is known as the vertical blank period.

The part of the vertical blank cycle serves as an opportunity for the Atari's ANTIC chip to signal an interrupt — the vertical blank, or VBLANK, interrupt. The operating system uses this occasion to perform some of its internal housekeeping duties such as updating the colour registers, checking the keyboard and operating the real-time clock and timers.

Consequently, for the operating system

design team allowed us to include our own machine language subroutine for execution as one of these tasks.

The machine language vertical blank interrupt player movement subroutine described here is called VBLANKPM and it allows you to POKE the next X and Y coordinates at which your player is to be displayed.

There is no need to repeatedly call the subroutine from Basic via the GOTO function. The subroutine will be executed automatically during the next vertical blank period.

It is theoretically possible to move the players every time a new screen is painted on the television — and that's 50 times every second!

You may recall that an approximate POKE to locations \$D086 to \$D08F set tells you to position the four players anywhere along the X axis. It hasn't been quite so easy to position the players vertically along the Y axis — until now.

The VBLANKPM subroutine moves players in both directions. Movements along the vertical axis involve moving the data and then replotting the player in the new position. VBLANKPM does this for you automatically. However, there are a few things that you must do first.

First you must get the VBLANKPM machine language ROM memory and notify the operating system that it is to be included as one of the housekeeping tasks to be performed as a part of the vertical blank interrupt.

Next it's up to you to move your players and tell VBLANKPM how to tell they are. After initialization, VBLANKPM continuously loops after the positioning of your players until you press the System Reset key.

Program 1 is an example of the initialization and use of the VBLANKPM subroutine. The program causes VBLANKPM to be loaded and invoked and plays zero and one to

Housekeeping keeps your Atari busy

be drawn and then moved about on the screen.

Lines 100 through 300 are the demonstration program. I'll save the explanation of these lines until after you've gained some insight into the established subprogram structure in lines 1000 to 1110. The VBLANKPPM machine language subprogram is expressed in the DATA statements on lines 3000 to 3100.

Finally, lines 3000 to 3000 supply a description of the two players used in the example.

The first task is to load VBLANKPPM into program memory. Page six locations 1000 to 1099 (0000 to 00FF) has been left available by Adam's software designers for applications such as this. These 100 bytes of memory are not disturbed by those and the operating system and are thus free for any use you want to put them to.

Line 1000 copies the VBLANKPPM to be read and FORC'd into memory. Line 1009 clears a few locations used by the subprogram — this statement can be omitted if you are sure that page six has not been altered since you switched on the computer.

We're going to employ the Adam's ANTIC chip direct memory access (DMA) facility to transfer graphics

information to the TV screen using single line resolution. This means that we must allocate 32 (2048 bytes) of memory for the storage of the player data.

In line 1000 we find the current top of available memory by reading RAMTOP. The value is measured in 32 bytes pages so we must subtract eight pages for 256 bytes to leave space for our player/missile map.

The GBAFMSZ is a device to give the operating system a chance to take note of our file write to RAMTOP. It will place the new graphics screen below the location and thus leave everything above RAMTOP undisturbed for our player data.

The lower 1024 bytes of this area are reserved for player data in this example so player data occupies PMBASE+1024 to PMBASE+1070. Player one is located at PMBASE+1080 to PMBASE+1090 and so on. Figure 1 shows you how this looks in memory.

Line 1040 clears any residual data from the whole player area, but in most cases all except player data will be cleared anyway and you can make sure you can offer that this line.

Lines 1060 and 1080 are used to draw players one and two. VBLANKPPM

PMBASE	Location	Value
PMBASE + 320	Address 1000	0000
PMBASE + 1024	Player Zero	0000
PMBASE + 1080	Player One	0000
PMBASE + 1120	Player Two	0000
PMBASE + 1180	Player Three	0000
PMBASE + 2048	End of PMD in memory	0000

Figure 1. PMBASE memory map

PM expects the players to be drawn such that their top line is initially placed at the beginning of the individual player's storage area. The player can be as tall as you like up to 256 lines — of course, you will never see all of a player which is that tall on the screen at once.

Line 1070 is used to set the player colour registers in 704 to 707 and assumes that you've already set variables POCOL0 — POCOL3 to explain the values you want.

Line 1080 establishes the addresses which you will be using later in regard to player movement. PLX and PLY are the locations POCOL0 to POCOL3 to explain the values X and Y position of player one.

MARRIOTT REWARDS
 (800) 222-2929

HILTON
 (800) 451-9595

the GEM/Plus1 program with a better font on line.

I also have a comment for your Atari Developer called "mailbag". The trouble is that it puts "readers email" address in it, so that if someone there is nothing they will be happy to email me I doing wrong please.

Also, when are I doing wrong with the Telnetd user system that runs the "atn" (atn@atn.com)? The information comes up as "atn" when I log on but I am not getting anything to do.

I found Atari magazine in France only in the field. But when was nothing else available that was the Atari magazine. If there is no other program on the market, could you where you have found the contact with me put me on to something larger that better suits my needs? I find it hard to believe that the only program available for Atari 8-bit users is so small.

Good luck to Atari ST User. How are 8-bit users can enjoy a full magazine of our work. That brings me to another small query. What is Page 8?

I know it is a magazine, and I know that it is a Page 8, but I don't know my mail bag of the April issue of

ATARI USER Mailbag

WE welcome letters from readers - about your experience using the Atari magazine about tips you would like to pass on to other users - and also what you would like to see in future issues.

The address to write to is:

**Mailbag Editor
Atari User
Europe House
68 Chester Road
Hazel Grove
Stockport SK7 5NR**

✉

your mag that it is also something made by your computer. If the question sounds silly please forgive a learner.

As a grandfather, I'm rather old to be learning anything so perhaps this is something the youngsters learn at their first lesson but I notice at Atari magget to significant comments along the way - **Peter GJ Morris, Lanes, Wiltshire**

● Computers are always said to provide many problems for users, super-sized at that. However you do seem to have had more than your fair share of them.

All of your problems stem from the fact that the MultiWindows software doesn't

work very well, but to other software will integrate. Mirasol Technology's Data Mail Interface. Thus, HomePak can't access the modem because it can't find the correct interface file. **Alan 8001**

However, at last help at hand in the form of Mail Office 1. This package can save you modules, one of which is a comma package which will support the Data Mail device.

When using Mail Office 1 with Microtel/Telnet/Modem Gold you will be able to speed your downloaded programs straight on to disk, or use a 100 kilobit buffer. If you prefer it also supports the 120000 random so you can store up to 84k of text into the ramdisk before having to save it back to floppy.

While this software doesn't support Prolog you will find it very much more powerful for general comma use than MultiWindows.

As to your final query page 8 is an area of memory made the Atari 8-bit page of memory is 256 bytes, and so the 800th page of memory starts at address 16384 Hex (16384 Decimal). This area is special because no part of the Operating System, Basic or Data uses a far storage.

This means that it is left free for the programmer to use and is often used as a safe area for machine code programs or player music graphics data.

Monthly discs

I READ with interest your letter in your April 1988 issue which referred to Atari User monthly tapes and discs. As I have recently acquired a new drive I would be very interested in observing your monthly disc if this facility were reintroduced.

In fact I would also like all of the earlier copies a couple of a year ago I don't see if not I would indeed like to see computer tapes and disks. Perhaps there would be light into how tapes, disks and disks. I certainly hope that enough readers respond to make this worthwhile. - **Eric Henson, Leamington, Warwick**

Vital statistics

I OWN an Atari 800XL and keep a student studying for a psychology degree. I would like to know if there are any programs available dealing with statistics, psychology or that as I have a 1000 that drive. - **Robert Johnson, Southampton, Hants**

● Synapse Software has released a program called Gen Travel which may be of some use to you. It is more applicable for business travel analysis but you will almost certainly be able to adapt it.

Printing graphics

Could you tell me how to make graphics work on the 1020 printer? I typed both two pages from your September 1988 issue and it only printed to screen, not to the printer. I fiddled around with it and it still

Proofreading problems

I OWN an Atari 800XL and frequently use Amibuilder. When I discovered that Proofreader is a useful non-Apple email I bought a copy from Steve Shop.

As I could not find the package I had all the requirements listed only when you said the only program I could use that I discovered that the Amibuilder package is also necessary. This means you are prepared to accept £70 to upgrade from the disk version your money is well spent.

I wrote to Steve Shop but never received a reply. Can

you offer any advice on how I can get the only package caught in the trap? - **Bernie Harrison, Leamington Spa, Warwickshire**

● We contacted Alan and he said this problem. The reason Amibuilder doesn't work on disk is because the Proofreader itself requires to be online in drive 1. This too runs with Amibuilder, which should also be located from drive 1, so there is no way to run both modules.

I suggest that you try and not in hard to provide it from Steve Shop.

won't work, could you please tell me the name of another computer and where I could get it now? — **Matthew Giff, Derby.**

■ You'll be glad to know that Atari's can be used with a cassette recorder as a recording device and a 150 operations may be done before an tape rather than 100. You will obviously find that loading and saving takes a lot longer, and making up a library of INCLUDE subroutines might be a little harder due to the nature of tape.

The only major problem you will find if you want to use the Run-Time package or Programmers Aid Toolkit because they both come on disc and would need to be downloaded before you can use them.

Also, if you want to make your time machine work like Atari's, I can't see you'll be able to produce cassette subroutines. You could convert the binary file format into an subcode form, or use a little Basic loader routine. This only applies if you want to use a free-standing

machine code program, as Atari's source code can be loaded from cassette, compiled and then run with no problems.

Manual labour

I HAVE recently bought an Atari 2600 (plus 2600 disc drive) and also a copy of your helpful magazine. I am sure that I'm suffering like all the others due to lack of knowledge. The manuals I've read with my computer were not really good and don't explain the Basic commands or give any technical information whatsoever.

I am therefore led to believe that there must be a much better text available and I hope you can give me any info. Are there any other versions of Dos and Basic available and what are the best?

I have also bought only one copy of your mag. but have already found a very

helpful and have used some of the excellent tips from it. Keep up the good work — **G. Moppy, Wilby, Co. Durham.**

■ There are many books that uncover the hidden qualities of your Atari, but they can be very technical and hard to understand at first — we normally require a combination of the best books available.

Be patient when learning — it can be a long and confusing task. With that in mind, start off by getting a copy of the 13000. Hand book or Your Atari Computer (Revised Edition) from your dealer.

When you want to dig a little deeper, Mapping the Atari tells you what all the functions in memory do, and is an indispensable reference on the De Re Atari. It is another great source of information on applying the power of the Atari to its fullest.

These two books cover all the ground rules needed but they are heavy going. You can also buy various other books which skip lightly over complex matters and these would be fine for a beginner.

There are many alternatives to Atari's Dos and Basic including Dos 1.0, Dos 1.1, Dos 1.2, Dos 1.3, Dos 1.4, Dos 1.5, Dos 1.6, Dos 1.7, Dos 1.8, Dos 1.9, Dos 2.0, Microsoft Basic, Basic XL, Basic III and even our compiled versions of Basic.

Ask your dealer for his recommendations, but the combination of Basic III with either Dos 1.1, or SuperDOS would be very powerful indeed.

And keep looking at Atari User. Helping users get the best out of their computer is what we're here for!

User friendly

I WANT to tell fellow Atari users of the good, friendly and fun service that Compuserve UK has provided me.

Four months ago I bought

a 2080 disc drive with the free games. But on January 18 it would not load properly so I rang them up and they gave me a Compuserve address to email me along to.

I sent it off and two days later I got the disc drive back. Well done Compuserve for the fast service.

Dutch dilemma

RECENTLY I bought an Atari 1300X (Rise in Holland and I was therefore supplied with a manual in Dutch. It is impossible to obtain a manual in English, so what I do I don't use my computer fully.

I would therefore be grateful if anyone can help me — **A. De Vries, De Bogen, The Netherlands.**

■ We'll refer to your UK agent to see that they do all they can to help you with an English version of the manual.

Finding that, try to get hold of a copy of a book called The Atari 1300X Handbook or another entitled Your Atari Computer. Either will give you less more information than the manual does.

Computer support

Following advertisements in your magazine for Computer Support Ltd, on the 12th 1988 I asked them to supply a 64K upgrade for a

MicroLink

ALL program listings in Atari User are now available for free downloading on MicroLink, the UK's fastest growing electronic mail service. They join hundreds of programs already available on Britain's national on-line database.

Spellbound help

I HAVE a few lines for Spellbound. To get the spellbook into the 3rd floor, open the 3rd floor the Midwinter Summoner Door to the left wing the 3rd floor.

Give the Midwinter to her and then command her to help with the spell of Conjured from the roof. This will give her the spirit bar with the Midwinter anything you go to the basement.

The 3rd floor can be obtained from Summoner. The Summoner on the 2nd level.

To get past the gas room on the 3rd floor collect the 3rd floor the Midwinter Summoner from the 2nd floor and Power Pump Room from the basement. This will enable you to visit a

Summoner. Protectress spell.

To get past the dark room on the 3rd floor you must collect the glowing bottle from the 1st shaped room on that floor.

To get some energy collect the Bottle of Liquid from the roof and give it to Summoner. She will then give you the 3rd floor full energy.

To move up the wall on the 3rd floor enter the portal door from the ground floor. Summoner Lady Summoner to the 3rd floor and give her the 3rd floor.

Now command her to help and she will blow up the wall using her quick blow tool to go to the 3rd floor — **Neil Richardson, Cambsbury, Surrey.**

WHAT? FREE SOFTWARE!

Two professional software developers working in a homebased and internet for the full time range of computers

Digitek 1 and Digitek 2 for 1088 Drive
TWO FOR THE PRICE OF ONE
£3.99

Digitek 1 512K (1/2 or 1 meg)

Please send just £3.99 towards cost of Disc and Postage
(State drive when ordering)

SPECIAL LIMITED OFFER . . .
10 x 3.5" 512K Disks . . . Only £14.95

Order now and we will include extra disks
(format software) (see P47)

Also available 1 meg memory upgrade for 128 KTFMs
(format available)

Full range of hardware software and peripherals
at enquiries@doctord.com

DOCTOR SOFT Disc Value

Lose yourself in the magical world of Kerovnia!

This fascinating adventure features the most sophisticated parser around: You can type complex sentences and interact with the many characters, including some very intelligent animals.

This superb package includes a 44-page novel and a cryptic help section.

"The program took three man years of programming time to produce – and it shows. The Pawn is the stuff from which cults are made."

– Anthony Cann, writing about the Atan ST version in the May 1988 issue of the Atan User

HELLO, it's your old pal Brillig here again, but this time I feel a lot old. My adventuring mind is still as sharp as ever — do I always feel that? Looking at the mirror I can see no changes, looking outside tells me everything is the same — but I am somehow different, somehow rejuvenated in both mind and spirit.

A truly amazing thing has happened my friends, and Brillig is now confirmed as solving every adventure known to man and beast. My three brains joined in an ever up frontward I rush to my computer console and without a moment's hesitation load up the software, reach up the monitor and click on my own special quest — to help adventurers one and all overcome the Spanish trials and traps that have fallen on so many others in the past.

Some news comes to the ears this very moment of a bunch of role playing games soon to be available from SSI called *The Wicked Crown*, *The Rings of Zille* and the *Standards of Spring*. Also coming out soon are *Phantoms II* and *II*.

Local News: it about to release its first totally new adventure for many years: *Enchanted Night*. One of past year's adventures was the quest of an actual and who has been wronged by humans. The game contains something new about from the Author brother, which first idea position techniques are turned throughout the known universe.

Not content to stand still, they have developed a new coding system — a way to dispense with map making type in the corner of the location you want to go to and the character will find all in their direction. You can also tell other characters to run other errands at your behest. They have at

Exit maps, courtesy of Night Orc

By Brillig

last done away with those awful graphics that used to dominate their stories and replaced them using digitized pictures. It all sounds bliss to me, and not assured in such as *Night Orc* is in my hands I will give you the full run down.

A trip to the offices of Magnetic Scrolls is something of an adventure in itself. It is a dark, busy, one floor corner of early South London, not a stone's throw from London Bridge. I received a warm greeting from the programming team and was quickly provided with a cup of coffee (which I am reliably informed is a treat — you will never see them without one).

"So you've come to play *Gold of Thieves*, have you? They all agreed as they gave each other their no closer I know what he is letting himself in for. Look, taking no notice of the role better, your fearless hero set down in the keyboard and began to type.

The adventure is set once again in Arcadia and revolves around your attempts to become a better thief and to join the infamous Guild of Thieves of the title. The game opens with you and the Master Thief in a small town adjacent to an old jolly. He gives you your instructions, which are to relieve a nearby castle of its treasures and return them to him as his loot. You start with just a small bag to your name, and a great deal of hope.

The game is in *Thieves* — and there are around 30 of them — and there are even better than those in *The Pawn*. After some wandering around the countryside you will come across the castle, complete with its splendid moat, and it is here that most of the action takes place.

There will, using talk of *Thieves* being easier than *The Pawn*, but you can get all the rest of that out of your mind. Some of the puzzles are pretty tricky to say the least. To give you this the same ability as the one level is offering in that it too has the excellent, new GO TO command which will let you input a location automatically. You can even type GO TO SWARD if you can't quite remember where you left it.

The room descriptions are good and many, and there are lots of little clues hidden in the text that could easily be overlooked. The business that ran through *The Pawn* (remember the *Pawn* in *Gold*) is very apparent. I found one lovely sequence while in the library that involves over 20 differ-

many people believe, used when it is not wanted.

Anyway, after about four hours and 160000 cups of coffee I probably a day. David at Times is certainly going to be another player, make no mistake. And I'll see you soon with to play the web site. Mike

Those days at Tripoint have also been pretty long nights and they've just released a challenging yet very early interview: *Highway 61*. It's based on those terrible 8 movies of the 60s. You play the part of copiers in Buddy Bantank, famed producer of a whole series of budget movies like *A Copied Line* and *Most Cows the Blue*.

We started with a ride in a typical police van on the M101, which carried with it all the latent rage of the police but none, little and none. Burdett has now passed away and left you that whole nation, provided that you find 18 locations that are hidden in the house and grounds before sunrise.

So the adventure begins with you outside the mansion with nothing but a piece of bubble, a torch and the will in your possession. Right away there is a puzzle. All the doors are locked and you have no keys, and checking the windows they are all secure. How do you get in? No clues for you. I am afraid - but check the package very closely. Holmwood House is a great spot and will catch the money and fortune is becoming yet another Indiana classic.

While I'm talking about good relationships, it is time to get perspective off my chest. Sometimes I really get in an advantage in the back field off. You know the sort of thing - there you are happily exploring an ancient castle when all of a sudden you're in a corner and you're suddenly engulfed in a pile of you. You are dead.

It could "help" by giving you the
 an poor education taking you to
 college is constant saving and to
 avoid that overhead. It's better.

Get some major kudos for the success earned for the all levels of the environment for the necessity of a report. It is a boring repetitive unoriginal waste of time and effort. It's put in just as the programmer and gives a little bit of self satisfaction from a hopeless first time reader. If I never receive just one more stupid piece I am going to publish that author's name and address to raise ire/morale! For corrections, you have been warned!

Move on to your questions. Greg, I slipped from Oremouth again. Could you please let me know what I am supposed to do next in Ballybop. I can get the balloon pass through the lavette, crawl under the tarpaulin and enter the clown alley as well as finding the toilet. I just don't know what people in Balob want.

Well Geng you must use the talent to pass through the other talent to become a few more locations in this area. There is a fool lady who needs help. A hypocrite who will send you into a dream, a goods with a magical seed and an elected pole to knock out for Geng at it and let the future have you out on.

Steven Munching wonders: I never enjoyed
 the life in Milwaukee. I was simply on the
 fringe. Was I never the witness? Yes.

there is no library in Washington – possibly you obtain the manuscript? I say that the library is very important indeed – it would help for the more or not Chinese. The really is the world only

Barry Perent is having trouble with *Spidey*. The Peef keeps killing him and he still can't get the eggs open. Lash demands Barry show him some of your yolk to prove that will work out. It's a trap.

And finally D. Bingham is stuck in Mordens Quest – he just can't get past the waterfall or Tazem. Hence such a telling little story for a basket of my experience. Give the value of the jungle to get past Tazem, and to pass the waterfall you will have to climb the tree.

Well, that's about it. I have fun for this month, but I'll leave you with a couple of questions. Firstly, what do you think of the above interview magazine? Why not put pen to paper (or fingers in the keyboard) and let me know which advantages you find deserving of a prize?

I really think has been much debate about the relative pros and cons of using graphics with a adventure game. Now you all know the cons (and on this matter, but what do you think? Does one win and let me know who prefers text-only and who prefers graphics) - I'll let you know the results in a forthcoming issue.

1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 2175, 2176, 2177, 2178, 2179, 2180, 2181, 2182, 2183, 2184, 2185, 2186, 2187, 2188, 2189, 2190, 2191, 2192, 2193, 2194, 2195, 2196, 2197, 2198, 2199, 2200, 2201, 2202, 2203, 2204, 2205, 2206, 2207, 2208, 2209, 2210, 2211, 2212, 2213, 2214, 2215, 2216, 2217, 2218, 2219, 2220, 2221, 2222, 2223, 2224, 2225, 2226, 2227, 2228, 2229, 2230, 2231, 2232, 2233, 2234, 2235, 2236, 2237, 2238, 2239, 2240, 2241, 2242, 2243, 2244, 2245, 2246, 2247, 2248, 2249, 2250, 2251, 2252, 2253, 2254, 2255, 2256, 2257, 2258, 2259, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2272, 2273, 2274, 2275, 2276, 2277, 2278, 2279, 2280, 2281, 2282, 2283, 2284, 2285, 2286, 2287, 2288, 2289, 2290, 2291, 2292, 2293, 2294, 2295, 2296, 2297, 2298, 2299, 2300, 2301, 2302, 2303, 2304, 2305, 2306, 2307, 2308, 2309, 2310, 2311, 2312, 2313, 2314, 2315, 2316, 2317, 2318, 2319, 2320, 2321, 2322, 2323, 2324, 2325, 2326, 2327, 2328, 2329, 2330, 2331, 2332, 2333, 2334, 2335, 2336, 2337, 2338, 2339, 2340, 2341, 2342, 2343, 2344, 2345, 2346, 2347, 2348, 2349, 2350, 2351, 2352, 2353, 2354, 2355, 2356, 2357, 2358, 2359, 2360, 2361, 2362, 2363, 2364, 2365, 2366, 2367, 2368, 2369, 2370, 2371, 2372, 2373, 2374, 2375, 2376, 2377, 2378, 2379, 2380, 2381, 2382, 2383, 2384, 2385, 2386, 2387, 2388, 2389, 2390, 2391, 2392, 2393, 2394, 2395, 2396, 2397, 2398, 2399, 2400, 2401, 2402, 2403, 2404, 2405, 2406, 2407, 2408, 2409, 2410, 2411, 2412, 2413, 2414, 2415, 2416, 2417, 2418, 2419, 2420, 2421, 2422, 2423, 2424, 2425, 2426, 2427, 2428, 2429, 2430, 2431, 2432, 2433, 2434, 2435, 2436, 2437, 2438, 2439, 2440, 2441, 2442, 2443, 2444, 2445, 2446, 2447, 2448, 2449, 2450, 2451, 2452, 2453, 2454, 2455, 2456, 2457, 2458, 2459, 2460, 2461, 2462, 2463, 2464, 2465, 2466, 2467, 2468, 2469, 2470, 2471, 2472, 2473, 2474, 2475, 2476, 2477, 2478, 2479, 2480, 2481, 2482, 2483, 2484, 2485, 2486, 2487, 2488, 2489, 2490, 2491, 2492, 2493, 2494, 2495, 2496, 2497, 2498, 2499, 2500, 2501, 2502, 2503, 2504, 2505, 2506, 2507, 2508, 2509, 2510, 2511, 2512, 2513, 2514, 2515, 2516, 2517, 2518, 2519, 2520, 2521, 2522, 2523, 2524, 2525, 2526, 2527, 2528, 2529, 2530, 2531, 2532, 2533, 2534, 2535, 2536, 2537, 2538, 2539, 2540, 2541, 2542, 2543, 2544, 2545, 2546, 2547, 2548, 2549, 2550, 2551, 2552, 2553, 2554, 2555, 2556, 2557, 2558, 2559, 2560, 2561, 2562, 2563, 2564, 2565, 2566, 2567, 2568, 2569, 2570, 2571, 2572, 2573, 2574, 2575, 2576, 2577, 2578, 2579, 2580, 2581, 2582, 2583, 2584, 2585, 2586, 2587, 2588, 2589, 2590, 2591, 2592, 2593, 2594, 2595, 2596, 2597, 2598, 2599, 2600, 2601, 2602, 2603, 2604, 2605, 2606, 2607, 2608, 2609, 2610, 2611, 2612, 2613, 2614, 2615, 2616, 2617, 2618, 2619, 2620, 2621, 2622, 2623, 2624, 2625, 2626, 2627, 2628, 2629, 2630, 2631, 2632, 2633, 2634, 2635, 2636, 2637, 2638, 2639, 2640, 2641, 2642, 2643, 2644, 2645, 2646, 2647, 2648, 2649, 2650, 2651, 2652, 2653, 2654, 2655, 2656, 2657, 2658, 2659, 2660, 2661, 2662, 2663, 2664, 2665, 2666, 2667, 2668, 2669, 2670, 2671, 2672, 2673, 2674, 2675, 2676, 2677, 2678, 2679, 26

Adventuring

A classic adventure — available on the 8 bit Atari for the very first time!

Rick Hanson met with universal acclaim when it was released for the BBC Micro and Electron. Now it's available on disc for your Atari. As Rick Hanson Special Agent, your mission is to assassinate the evil General Garantz.

With 230 locations, 70k of text, and a more advanced parser, this top-quality adventure is better than ever!

Special offer price £9.95
— a saving of £5!

Now — the COMPLETE Mercenary Compendium

Here's all you need to get the full ounce of fun and excitement out of one of the most talked-about games of 1986. This is what the package contains:

Escape from Targ. A unique combination of flight simulation, adventure and arcade action. PLUS high speed 3D vector graphics! You crash-land on planet Targ's General City and you have but one aim — to escape!

Targ Survival Kit. For help when you need it, most. Includes maps of General City and its subterranean complexes. And a how-to-use 'Interlude on Targ' with more hints and tips.

The Second City. Thought you'd got away? Then load in this extra disc set and there's again No. 1 hits or close this time — you're on your own!

Two top adventure trilogies for you to play

Award-winning software house Level 9 has extensively re-written some of its best-selling adventures, and released them in two trilogies: *Jewels of Darkness* and *Silicon Dreams*.

In the *Jewels of Darkness* trilogy you start with *Colossal Adventure*, containing all the treasures, creatures, rooms and puzzles of the mainframe original.

In *Adventure Quest* you must discover the Old Roads to the Dark Tower, Fortress of the Demon Lord. Only there can you defeat him. There's magic in the air in *Dungeon Adventure*. Can you discover the treasure while facing the perils of skeletons, carnivorous jellys and orcs?

You save £8 when you buy one of these packs or £14 if you buy both

The first adventure in the *Silicon Dreams* trilogy is *Snowball*. You awake from suspended animation to find your spaceship on a collision course with Eden. In *Return to Eden* you must prevent the defence robots from destroying your ship. You have lost your memory in the *Worm of Paradise*, and you may have to join the governing party to regain it.

Each features:

- Over 600 illustrations
- New language interpreter
- Huge 1,600 word vocabulary
- Multi-command sentences
- Ultra fast response times
- 64 page novel and 12 page guide

TOMAHAWK

BY D. K. MARSHALL

TOMAHAWK — a stunningly realistic flight simulation that puts you in command of an Apache Advanced Attack helicopter. Flying low over a spectacular 3D real-world display with over 1000 ground features — **TOMAHAWK** puts you in the hot seat.

Ground attack and air-to-air interceptors is the challenge — day-to-day in the thick of the battlefield. Your combat mission is to locate and destroy enemy ground forces. It could be the enemy before — it can be the Apache is for real. The most real, deadliest ground helicopter ever.

Now have the weapons, the machine . . . can do and prepare. Machine will.

- Approximately 25,000 ft. of water with over 7,000 gal. per inch. freshwater available
- Second all-natural electric generating plant, with lower priced electricity, water and oil rate gas
- Greater navigation in the largest trading
- Expanding water systems.
- Growth of tourism.
- Port facilities - 100,000 ft. of pier, is competitive against others.
- High taxes.
